

Marksmanship Systems are compatible with a variety of weapon systems including Laser Trainers, Recoil Kits, Simulated Recoil Weapons, and Laser Inserts. Some of the available models include Glock, H&K, M16/M4, Sig Sauer, and Beretta. Laser Shot can also create specific training weapons upon request.

Individual & Crew-Served Simulated Recoil Weapons

Simulated recoil weapons are highly realistic non-guns made with real weapon parts replicating weight, balance, trigger pull, recoil, and realistic magazine changes/feed tray loading that provide a high level of physical and functional fidelity.

Laser Trainers

Laser Trainers provide a training weapon with a realistic size and feel without the recoil.

Drop-In Recoil Kits

Laser Shot offers both tethered and tetherless drop-in recoil kits for many variants of individual and crew served weapons.

Dry-Fire Laser Inserts

Laser Shot produces high quality and dependable in-bore handgun and shotgun dry-fire laser inserts.
