

LASER SHOT

Laser Shot Updates for October 2017

Laser Shot and Virtual Tactical Academy held classes on personal protection at the U.S./Texas Law Shield range day. Participants got a chance to train on Laser Shot's Judgmental Training Software.

This past month Laser Shot and Virtual Tactical Academy were invited to U.S./Texas Law Shield's range day where they conducted concealed carry classes. Students were engaged in Judgmental Training Software which is a video-based use-of-force simulator. Students were confronted with life and death scenarios as well as learning what to do when a compliance situation occurs. Judgmental Training Software (JTS) improves effective judgmental training using high definition interactive simulation scenarios. These scenarios are created from anticipated threats or previous real-world situations that resulted in officer or soldier fatalities.

Laser Shot's NEW **SIM7** is the latest in the collection of Laser Shot's simulated weapons.

Designed by firearm engineers to replicate the form, fit, and function of prolific polymer-framed sidearms, the SIM7 instills unforgettable muscle memory into the user with its true-to-life trigger weight, take-up, and reset. This simulated firearm can be outfitted with the user's choice of a visible laser for standard dry-fire training or an 850nm infrared laser for integration with Laser Shot virtual firearm training simulators.

Powered only by two AAA batteries, the SIM7 Features:

- Reliability through Countless Shots
- IR or visible laser
- Familiar ergonomics
- Moving Action
- Milspec durability
- True-to-life trigger
- Weight, Take-up, Break, Reset
