

MMTS / Mobile Marksmanship Training Simulator

MMTS Features and Options:

MMTS Features:

- “Turn-key” system design ensures quick set-up
- Integrated Instructor Station
- Compatible with Small Arms and Crew Served Simulated Weapon Systems
- Individual and Collective Skills Training
- Compatible with VBS3 Tactical Weapon Simulator for Tactical Engagement Training
- Accurate Ballistics Simulation for Realistic Training
- Utilizes Space Efficiently, Requiring Only Six Feet (6) for Projection
- Compatible with Crosshair™ Magnified Optics Simulator

MMTS Options:

- Scalable - Add Additional Lanes Through Networking Multiple MMTS Units Together
- Convertible to Live-Fire Mode for Use in Ranges
- Laser Shot Virtual Shoot House (CQB) Software
- Sensored Feedback for Simulated Weapons
- Shoot Back System
- Less-Lethal Training Devices
- Use of Force Training with JTS (Judgmental Training Software)
- Video/Audio AAR Hardware
- Additional Service/Maintenance Agreements

MMTS / Mobile Marksmanship Training Simulator

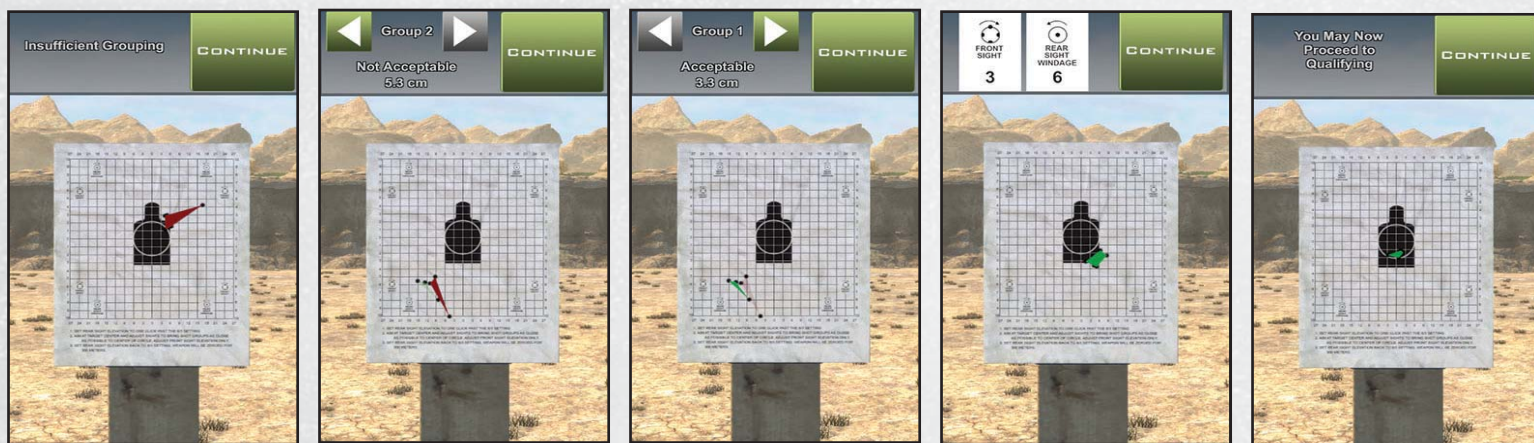

Overview:

Laser Shot's MMTS is a **multi-functional** firearms simulator designed to address both basic and advanced firearms training requirements for combat, combat support, and combat service support units. Optional add-on modules of mission specific training courseware or specialized weapon systems can elevate standard weapons training to address all individual, collective, and asymmetrical threat training requirements.

The MMTS is a cost effective simulator creating success in weapon proficiency utilizing virtual training vignettes. Simulators provide immediate feedback opportunities for both the Soldier and instructor to master basic weapon fundamentals such as grouping, zeroing, practice and qualification prior to going to the range for live-fire exercises.

The MMTS addresses emergent threats and current marksmanship concerns with proven simulator technology that directly supports the transfer of skills to improve individual results. It also goes to the next level and provides advanced training opportunities with dynamic virtual targetery or interactive scenarios to develop additional skills.
