- ▶ Sensored Feedback for Simulated Weapons
- ▶ Shoot Back System
- ▶ Less-Lethal Training Devices
- ▶ Use of Force Training with JTS (Judgmental Training Software)
- ▶ Video/Audio AAR Hardware
- ▶ Additional Service/Maintenance Agreements

MMTS LE COMPACT

Mobile Marksmanship Training Simulator

Overview:

The **MMTS LE Compact** is a multi-functional firearms simulator designed to address both basic and advanced marksmanship requirements along with critical judgmental use-of-force training. A compact version of the full-sized MMTS, the MMTS LE Compact is a cost-effective alternative that maintains the core functionality necessary for law enforcement applications. It accomplishes this by featuring a single integrated console, which is all that is needed to run everything in Laser Shot's LE courseware library.

The MMTS LE Compact provides immediate feedback opportunities for both the trainee and instructor to master basic weapon fundamentals, practice and qualification prior to going to the range for live-fire exercises. With the addition of Judgmental Training Software, law enforcement instructors are provided with the best virtual toolkit available to prepare trainees for the challenges they will face in the field.
